How many construction companies that you currently work with or have worked with in the past can honestly say they have extensive experience in specialty labs? RVM can, we recently completed construction on In Vitro Labs in La Habra and have ongoing projects with Merical Vitamin manufacturing, to name just a couple of our projects.

Our approach is a global one, we work with the entire management team to outline the parameters of the job, bring in outside consultants as needed, and design construction schedules that minimize downtime.

We do the research so that we can help you design and build an office space or manufacturing plant to increase the revenue, efficiency, and value of the business. Consider this:

- Work flow
- Digital management flow
- Paperwork flow
- Interaction between employees, managers, and departments
- Cash flow
- Space planning
- Industry standards, regulations and compliance
- Safety
- Production flow increased
- Labor management
- Quality control
